Claim 4 (presently amended) A body force alarming apparatus ~~of claim 1 further comprised of~~
comprising:

a housing;

a power supply;

a piezo sensor;

a controller;

an output generator; and

a microcontroller;

wherein said piezo sensor is accommodated within a user's shoe and connected to said controller;

wherein said piezo sensor, controller and said output generator are connected to said power supply;

wherein said controller, output generator and power supply are accommodated within said housing;

wherein said controller is connected to said output generator,

Appl. No. 10/708,304

wherein said controller is set to generate a signal to the output generator when a threshold level of force signal is received from said piezo sensor;

wherein said sensor signals said controller when force from an impact is applied to said piezo sensor; and

wherein said controller signals said output generator when one or more signals indicating threshold levels of force have been reached; and

wherein said output generator generates a perceivable signal in response to a signal from said controller and wherein said microcontroller, once activated by a user with a switch, performs the steps of:

recording one or more amounts of impact for a predetermined period of time;

averaging said amounts of impact recorded over said period of time; and

setting the controller's feedback threshold to an amount equal to the average value.

Claim 5 (presently amended) A body force alarming apparatus of claim 14, ~~further comprised of a microcontroller~~ wherein said microcontroller, once activated by a user with a switch, performs the steps of:

recording one or more amounts of impact for a predetermined period of time;

Appl. No. 10/708,304
Reply dated 28 November 2007

averaging said amounts of impact recorded over said period of time; and

setting the said controller's feedback threshold to an amount above or below the average value.

Claim 6 (cancelled).

Claim 7 (cancelled).

Claim 8 (cancelled).

Claim 9 (cancelled).

Claim 10 (cancelled).

Claim 11 (cancelled).

Claim 12 (cancelled).

Claim 13 (cancelled).

Claim 14 (cancelled).

Claim 15 (cancelled).

Claim 27 (presently amended) A body force alarming method ~~of claim 24, comprising the steps of:~~

setting a controller to generate a signal to an output generator when a threshold level of force signal is received from a piezo sensor;

signaling said controller with said sensor when an amount force from an impact is applied to said sensor;

signaling said output generator when one or more signals from said sensor indicate that one or more predetermined threshold levels of force have been sensed; and

generating a perceivable signal with said output generator in response to a signal from said controller wherein the steps are performed using an apparatus comprised of:

a housing;

a power supply;

said piezo sensor;

said controller;

said output generator; and

Appl. No. 10/708,304

a microcontroller;

wherein said piezo sensor is accommodated within a user's shoe and connected to said controller;

wherein said piezo sensor, controller, microcontroller and said output generator are connected to said power supply;

wherein said controller, output generator, microcontroller and power supply are accommodated within said housing; and

wherein said controller is connected to said output generator; and

~~wherein said apparatus is further comprised of a microcontroller~~ wherein said microcontroller, once activated by a user with a switch, performs the steps of:

recording one or more amounts of impact for a predetermined period of time;

averaging said amounts of impact recorded over said period of time; and

setting ~~the~~ said controller's feedback threshold to an amount equal to the average value.

Claim 28 (presently amended). A body force alarming method of claim 2427, wherein ~~said apparatus is further comprised of a microcontroller~~ wherein said microcontroller, once activated by a user with a switch, performs the steps of:
